A TEACHING PROPOSAL · AI IN MARKETING AND BUSINESS

Teach marketing with the AI tools *businesses are using now.*

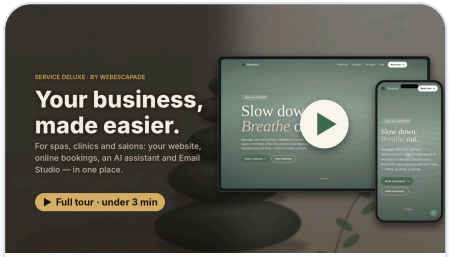

A short, practical module built around three real platforms designed and built here in Sydney. Students watch them working, test them, and critique them, so the marketing theory they're learning becomes visible, and they learn to use AI with good judgement.

Prepared by **Marc Teleki**, Trainer, Business and Hospitality For: **Marketing and Business** classes **November 2026**

CASE 1 · HOSPITALITY

A restaurant and its guest journey

CASE 2 · SERVICES

AI customer service

CASE 3 · MARKETPLACE

Marketing to two audiences

🎓 **Purely educational.** The platforms are used as case studies only. Nothing is sold to students or the college, students need no accounts, and no student data is collected.

WHY NOW

AI is already part of *everyday marketing.*

Small businesses now use AI to write emails, answer customers and run their websites. Our students will be asked to do the same, and to know when the AI is wrong.

01

Theory becomes visible

The customer journey, the marketing mix, segmentation and retention, shown on real screens instead of a textbook diagram.

02

Skills employers ask for

Briefing an AI tool, editing what it writes, setting up a chatbot's knowledge, and planning a campaign people actually open.

03

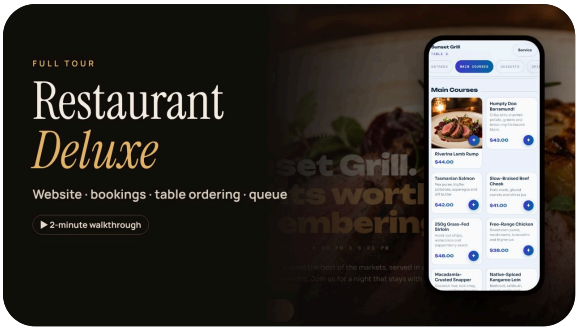

Judgement, not just tools

Checking facts, protecting privacy, getting consent and keeping a human in charge. The habits that make AI safe to use at work.

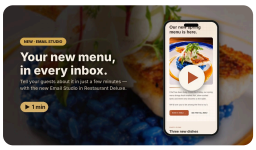

THREE LIVE CASE STUDIES

Three businesses. *Three marketing lessons.*

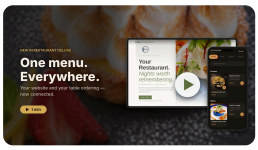

Each case study comes with short videos students can watch in class, plus a live example they can try on their own phones.

One menu, every channel
youtu.be/CQgsbNhttqw

CASE 1 · HOSPITALITY

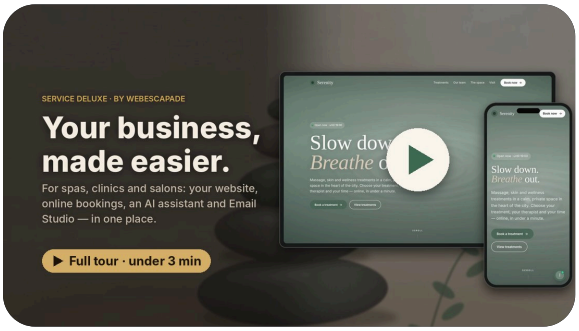

A restaurant and its *guest journey*

One independent restaurant: website, online booking, ordering at the table, then a follow-up email that brings the guest back.

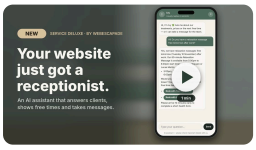

- **The customer journey, end to end.** From finding the restaurant online to the email that invites them back.
- **Consent-based email marketing.** Only guests who said "keep me posted", with an unsubscribe link in every email.
- **Segmentation and retention.** A "we miss you" email for guests who haven't returned, versus a new-menu email for everyone.
- **Consistent product and price.** Change a dish once and the website, table menu and emails all match.

Class task: map the restaurant's customer journey, then brief an AI tool to write the next campaign email and judge it against the brief.

Reminders and tips that bring clients back
youtu.be/yIXYHlhldnM

CASE 2 · SERVICES

AI customer service and *conversational marketing*

A day spa, a clinic, a salon: clients book online and an AI assistant answers questions on the website, day and night.

- **What a chatbot should, and shouldn't, say.** It only uses facts the business gives it, and it says when it isn't sure.
- **From question to lead.** How a conversation turns into a booking, or a message the owner follows up.
- **Retention marketing.** Rebooking reminders, offers and helpful tips. Value first, selling second.
- **Testing AI like a customer.** Students ask it hard questions and record where it helps and where it fails.

Class task: chat with the demo spa's assistant, write a test report, then write the "knowledge brief" an AI assistant would need for a local business.

CASE 3 · A TWO-SIDED MARKETPLACE

ChefLink Sydney

A platform that connects professional chefs with venues that need them, with chef portfolios, an approval step and a CRM for outreach.

Audience 1 · Chefs

Audience 2 · Venues

CASE 3 · PLATFORMS AND PERSONAL BRAND

Marketing to *two audiences at once*

ChefLink has to win chefs and venues at the same time. That makes it a clear way to teach value propositions, personal branding and relationship marketing.

- **Two value propositions.** What a chef wants versus what a venue wants, and how one website speaks to both.
- **Personal branding.** A chef's portfolio of dishes, story and skills, built for a hiring audience.
- **CRM and outreach.** Templates, tone and follow-up, and when to personalise rather than automate.

Class task: write a value proposition for each audience, then use AI to draft two outreach messages and compare their tone.

SESSION PLAN

Four sessions, *or one workshop.*

Each session pairs a short video with hands-on work, and each one produces evidence that can support assessment.

AI in the marketing mix 1

Watch the restaurant and service case studies. In groups, map each platform to the customer journey and the marketing mix, and spot where AI is doing the work.

Evidence: annotated customer-journey map

Write it with AI, then edit it 2

Brief an AI tool to draft a campaign email for a real scenario (a new menu, an event, a rebooking reminder). Edit it for brand voice, accuracy and consent rules.

Evidence: brief, AI draft and final copy, with a short rationale

Conversational marketing 3

Test a live AI assistant with real and tricky questions. Then write the knowledge brief and the "say this, never say that" rules for a business of their choice.

Evidence: chatbot test report and knowledge brief

Plan, measure, improve 4

Build a small communication plan: audience, channel, message, timing and the measure of success (opens, bookings, replies), with a responsible-AI checklist.

Evidence: one-page marketing communication plan

RUNNING THROUGH EVERY SESSION

Using AI *responsibly.*

Students learn the habits that make AI safe to use in a business, not just the buttons.

Consent first

Email only people who agreed, with a working unsubscribe link (Spam Act 2003).

Protect privacy

What customer data should never go into an AI tool, and why.

Check the facts

AI can be confidently wrong. Every price, date and claim gets checked.

Be honest about AI

Tell customers when they're talking to an assistant, and give them a person to contact.

Inclusive language

Spot bias and stereotypes in AI drafts and fix them.

A human signs off

The business owns the message. AI drafts, people decide.

ALIGNMENT

Where it fits in *the units we teach.*

UNIT	TITLE	HOW THE MODULE HELPS
BSBMKG433	Undertake marketing activities Cert IV Marketing and Communication · core	Plan and run a small campaign using a real platform as the example.
BSBMKG435	Analyse consumer behaviour Cert IV · core	Customer journeys, guest segments and how people respond to a chatbot.
SIRXMKT002	Use social media to engage customers Cert IV · elective	Turning a campaign email into short social posts with AI, then editing them.
BSBMKG541	Identify and evaluate marketing opportunities Diploma of Marketing and Communication · core	Evaluating AI tools as an opportunity for a small business.
BSBMKG542	Establish and monitor the marketing mix Diploma · core	Product, price and promotion kept consistent across website, menu and email.
BSBMKG552	Design and develop marketing communication plans Diploma · core	Session 4: the one-page communication plan with measures.
BSBMKG555	Write persuasive copy Diploma · core	Session 2: briefing AI, editing its draft and justifying the final copy.
BSBMKG546	Develop social media engagement plans Diploma · elective	Planning engagement around a launch, like a new menu or a new service.

Unit codes from BSB40820 Certificate IV and BSB50620 Diploma of Marketing and Communication (training.gov.au). Final mapping to be confirmed with the college's training and assessment strategy.

DELIVERY

Easy to *try first.*

Start small with one workshop. If it works well for the students, it can grow into a short module.

Option A

One 3-hour workshop

Sessions 1 and 2 in one class: the case studies, then writing and editing with AI.

Option B

A 4-week module

All four sessions, one a week, ending with the communication plan as assessment evidence.

Option C

Embedded in existing units

Use a single case study inside a unit we already deliver, as a live example.

- ✓ A projector and internet
- ✓ Students' phones or laptops
- ✓ No logins or accounts
- ✓ No student data collected

ABOUT THE TRAINER

Marc Teleki

Swiss-trained chef and former head chef, and a VET trainer in business and hospitality since 2008. Through my design studio I built the three platforms in this proposal, using AI as a working partner, so I can show students not only what AI does but how it is used to build and run a real business.
